SwarmGuard

INALP

Remote Access

Secure remote access to machines and systems.

Diagnose faults remotely, reduce on-site visits and restore operation sooner.

Security

Keep data private with endto-end encryption. Control who you connect to and control access.

Connectivity

Connect across different networks. Adapt automatically to network changes and recover from outages.

Simplicity

Set up devices with a QR scan. Manage access centrally. Less effort, fewer errors.

Sovereignty

Your infrastructure. Your jurisdiction. Fair pricing and licensing. A Swiss partner close to you.

Add remote service to new and existing machines.

Software for new products

Embed the SwarmGuard Agent alongside your machine application.

Gateways for existing equipment

Reach existing equipment through a gateway, without installing an Agent on each device.

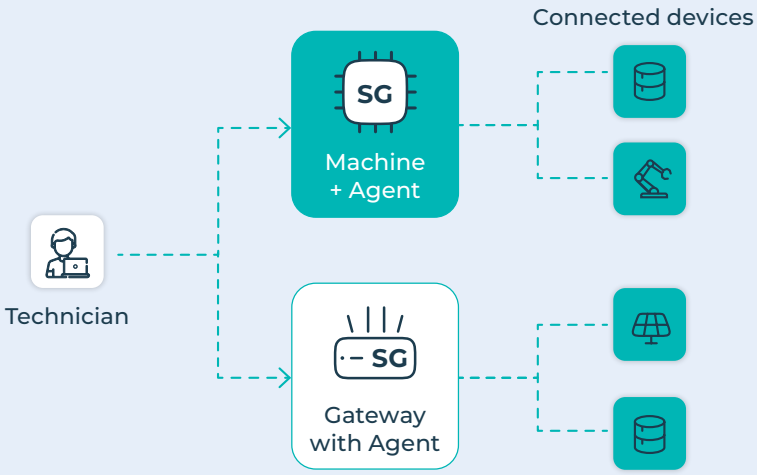

SwarmGuard | Remote Access

SWISS ENGINEERING.

How SwarmGuard works for your service team.

Two ways to connect your machines.

Run our Agent on your machine or use a gateway with it included. Both can reach devices on the machine's network.

Work with your existing service tools.

Choose the machine or site.

Find device and service.

Open your maintenance tools.

Open the tools you need.
Access web interfaces or compatible engineering tools through the Desktop Client for Windows or macOS.

Connect when you need to.
Start connections on demand and keep several open at once.

Security

Keep your customers in control.

- **Choose who may access each machine** by assigning permissions in one central place.
- **Let customers approve service access** before a maintenance session begins.
- **Keep maintenance data private** with encrypted connections for remote service.

Connectivity

Reach machines wherever they are.

- **Spend less time setting up remote access** with connection settings handled automatically.
- **Reach machines across customer sites** even over mobile networks and behind firewalls.
- **Resume work quickly after connection drops** with connections restored automatically.

Simplicity

Simplify management as your fleet grows.

- **Prepare machines before delivery** by scanning a QR code before they go online.
- **Set up access with less effort** using the visual Intent Graph instead of manual rules.
- **Manage new and existing machines together** with one platform for embedded Agents and gateways.

Sovereignty

Keep long-term control.

- **Control your infrastructure** by running the complete platform on your premises.
- **Reduce cross-border legal exposure** by avoiding dependence on foreign cloud platforms.
- **Keep your commercial freedom** with fair pricing and perpetual licensing.

Swiss engineering. Direct collaboration.

Inalp Solutions AG brings over 25 years of communication software experience. Work directly with the engineers who build your platform, from integration and deployment to ongoing support.

Get started with your machine.

Request your Remote Access Getting Started Bundle: a trial account, a hardware gateway, and help from our engineers. **info@inalp.com**
